INSTALLATIONS

Notes: ***Create a Jira ticket for this assignment, work on the tasks listed below, and submit the challenge completion document by EOD with clear steps and required evidence (outputs/screenshots).***

First Challenge

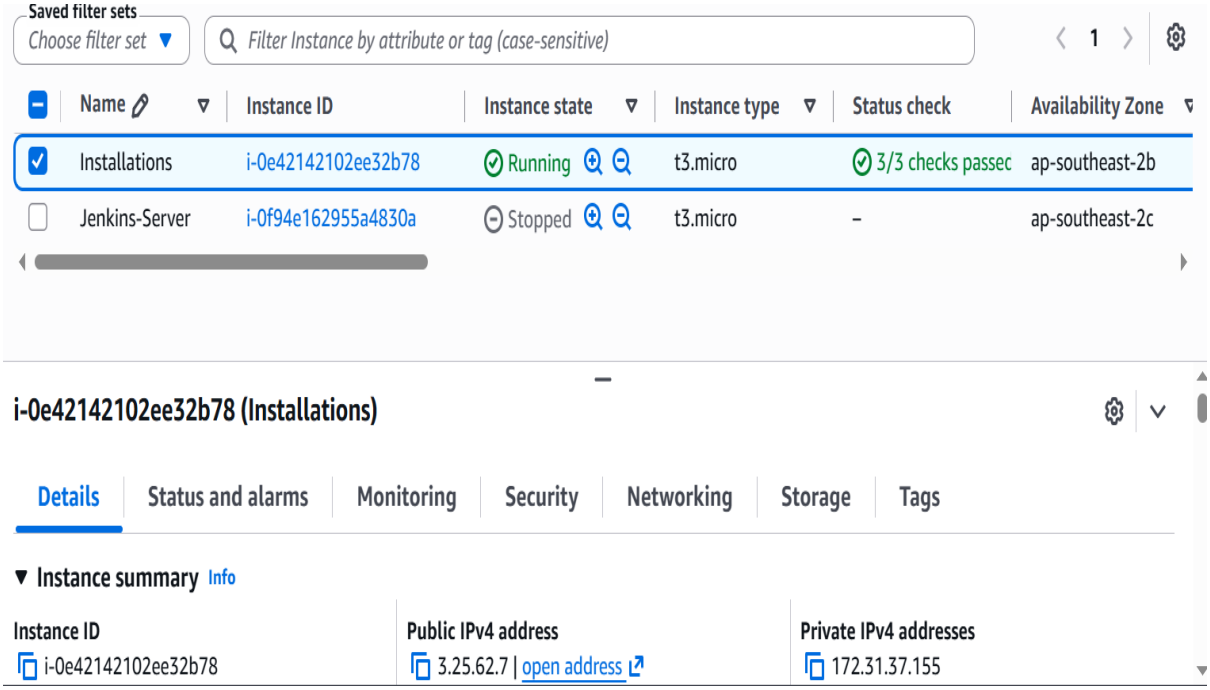

- **Launch one EC2 instance using Amazon Linux 2.**

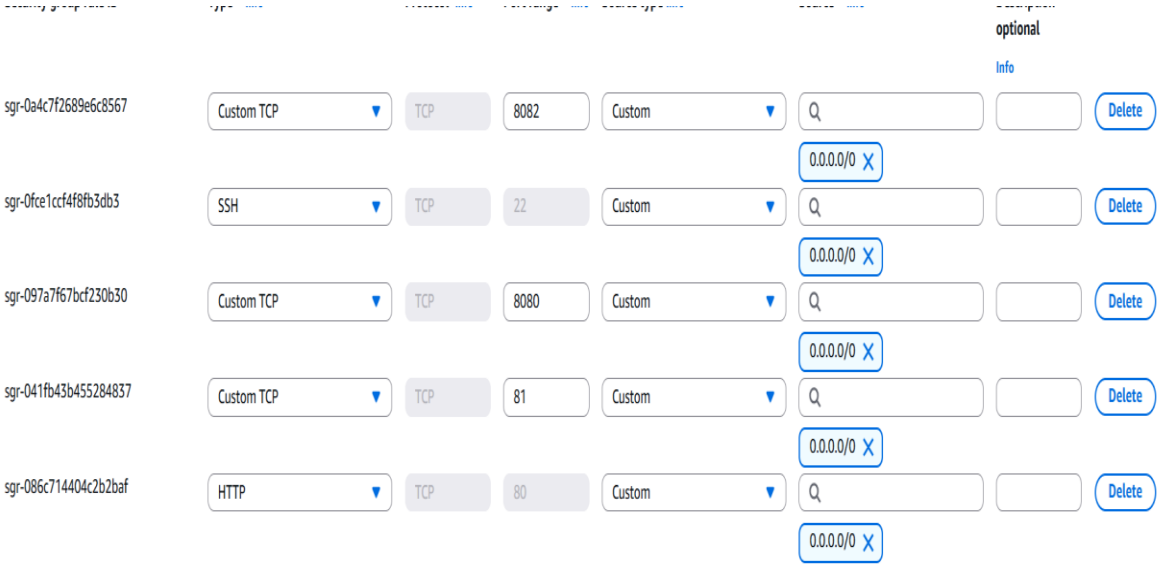

- **Launch one EC2 instance using Amazon Linux 2.**

  - **Install Jenkins.**
  - **Install Apache.**
  - **Install Nginx.**
  - **Install Apache Tomcat.**

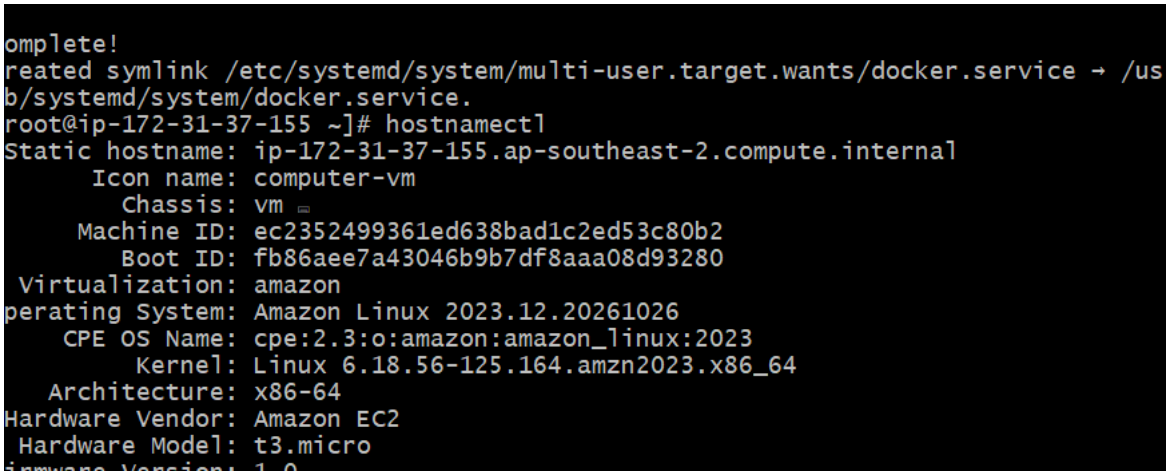

Everything needs to be setup and running on the same EC2.
You can change the port numbers as required.
Need to complete this before logging off.

1) Launch one EC2 instance using Amazon Linux 2.

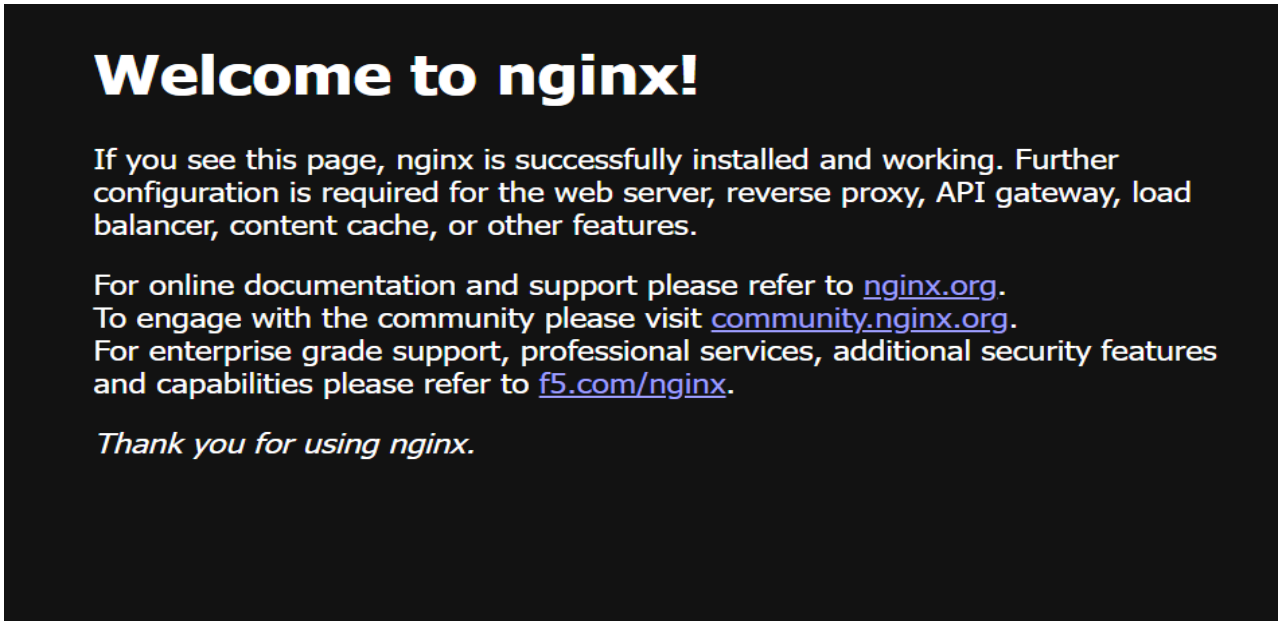

Install **Docker**.

Install **Nginx(80)**

Install **Apache**.(81)

Install Apache

sudo yum install httpd -y

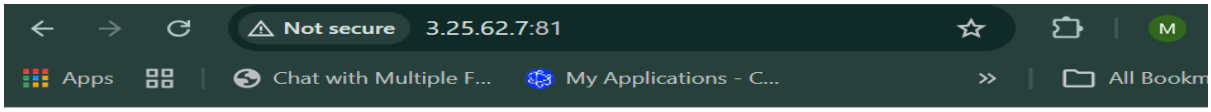

Change port from 80 to 81

sudo sed -i 's/Listen 80/Listen 81/' /etc/httpd/conf/httpd.conf

Start and enable Apache

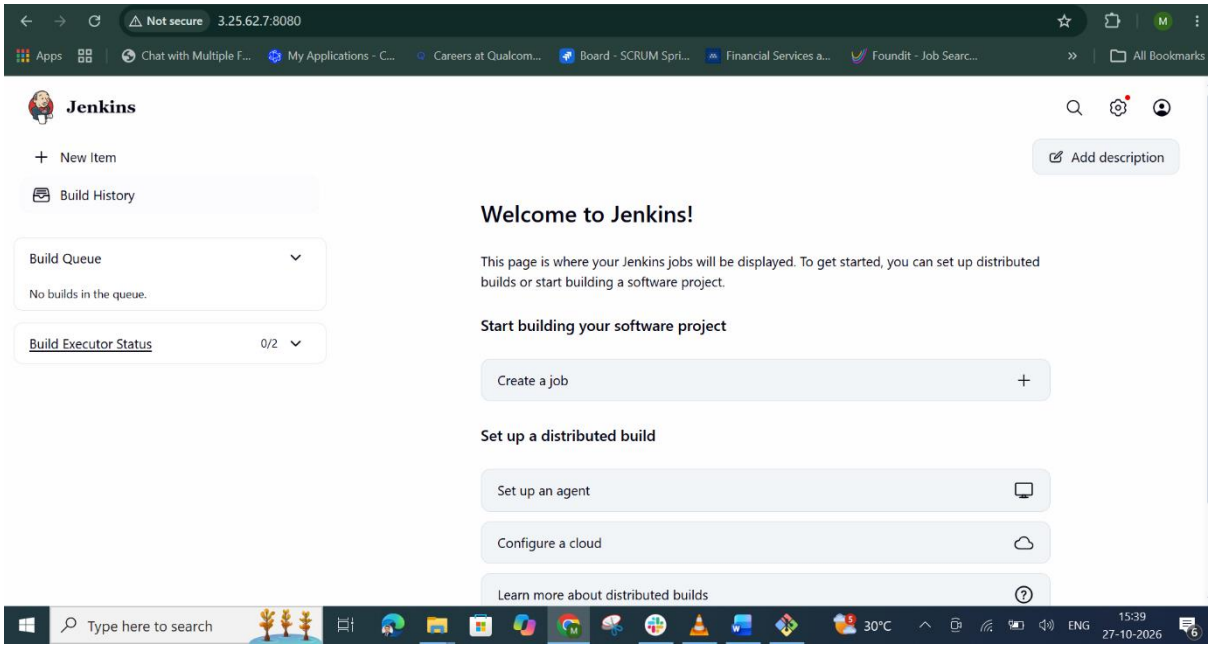

sudo systemctl start httpd

sudo systemctl enable httpd

It works!

Install **Jenkins**.(8080)

Install Apache Tomcat.
